## Thank you for choosing us as your hot tub supplier

We hope the hot tub will give you many wonderful baths and pleasant moments.

For the best conditions for lifelong durability we recommend that you read through the user manual before you start using the new hot tub. This user manual applies to the Town hot tub and will describe what is important to think about before, during and after your bath.

If you have any questions, you are welcome to contact us. Contact details can be found on the front page.

## RECEIPT OF DELIVERY

Check that no transport damage has occurred during delivery. If this has occurred, read further instructions during open purchase. Lift off the lid and then remove all cartons and loose parts from the tub.

Then fold the hot tub down so that it stands with the bottom on the ground. Remove the conveyor belts, the pallet and the protective packaging.

Check that all the following parts are included:

- Gas heater
- Assembly trolley for the gas heater
- Drainage and sewage sludge
- Mounted hoses
- Reduction valve for the gas tube is not included.

Then lift the hot tub into place, (recommended 2-3 people for lifting, alternatively use a lifting crane or similar aids). Grab under the panel when lifting. The hot tub is not suitable for rolling.

Make sure people who lift are in good physical condition and use good lifting technique. If you have had problems with your back in the past, you should avoid this heavy lifting.

Before you fill the hot tub with water for the first time, it should be rinsed and is wiped out as assembly dust and dirt often remain after assembly in the factory.

The hot tub must be placed on a flat level and firm surface. If the hot tub is to be on a lawn, we recommend placing 6-8 ground stones under the joists of the hot tub.

## INSTALLATION OF THE HOT TUB

1. Mount the four clamps to the lid with the supplied screws. The code for the lid is 00. It cannot be changed.

2. Read the separate manual for the gas trolley to motor the heater and trolley and also to start the bath.

## OPEN PURCHASE & SHIPPING DAMAGE

We want to be sure you made the right choice. That's why you always have 15 days to buy with us. Open purchase assumes that you still have the original packaging and have not used the product. You are responsible for the return shipping, but get back the full amount for the product minus a deduction of SEK 2,000.

The product must be returned in its original condition. Deductions are made when returning a specially ordered product or damage.

If the hot tub has suffered shipping damage, it is important that you photograph these before unloading from the transport truck. **A signature of the driver on the delivery note is also necessary to receive any compensation.** Then send an email to [info@svenskabadtunnor.se](mailto:info@svenskabadtunnor.se) with pictures and an explanation of what happened.

Otherwise, the Consumer Purchase Act and the Distance Contracts Act are complied with. In the event of a dispute, we follow the recommendations of the General Complaints Board. For more information, read our purchase conditions on the website.

## MAINTENANCE

### THE HOT TUB

- The plastic is wiped clean with a wet cloth and a little mild detergent without surfactants if necessary.
- Clean the filter for the gas heater after every bath.
- The hot tub's panel is treated with an oil glaze. Treat the panel with a transparent oil glaze as needed or once a year.

### THE BATH WATER

We recommend our customers, who do not have a bath equipped with a purification system, to change the bath water between each bathing occasion. If you do not have the opportunity to do this and choose to use the bath water more than once, there are some simple tricks to maintain good water hygiene.

- Always shower before going into the bath in order to avoid the bath water being contaminated with sun lotion and skin particles. This should also be done when using a treatment plant.

- Add bactericides. It is important to **never** add a chlorine-based agent (or other disinfectants with corrosive content) as chlorine is not good for the skin, the environment or the gas heater. We recommend the chlorine-free disinfectant BioCool. Dosage takes place according to the instructions on the bottle. Pool disinfection should also be used if a treatment plant is used.

The above advice increases the possibility of using the bathing water on more than one bathing occasion. Remember that circumstances such as weather conditions, the number of bathing occasions and the number of bathers are decisive for how long the bathing water can be kept hygienic.

### SALTWATER

It is not possible to use salt water in the hot tub.

### WINTER USE

When you have finished bathing during the winter, you must empty the water from your bath. You must also ensure that the water flows out of the hoses so that they do not freeze. The gas heater and the gas must be stored in a frost-free area when not in use. No guarantees apply when water is left in at sub-zero temperatures as there is a high risk of something freezing.

If it is very cold outside, it is also important to keep an eye on the gas heater while it is heating. If, for example, the gas runs out or freezes during heating, the gas heater will stop. There is then a risk that the hoses will have time to freeze if you do not have the gas heater under supervision.

### IMPORTANT!

- **Read the gas heater's separate instruction sheet before use.**
- **Never leave children unattended in the bathtub.**
- **Always check the water temperature before you or someone else jumps into the bath.**
- **The water that comes out of the gas heater can get very hot. Be careful not to burn yourself or someone else.**
- **Make sure that no unauthorized person can get into the bath without your knowledge.**
